The UCSD Department of Bioengineering

Mission Statement
To provide our students with an excellent education that enables successful, innovative, and lifelong careers in bioengineering industries and professions.

Student Learning Outcomes

- An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics.
- An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors.
- An ability to communicate effectively with a range of audiences.
- An ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts.
- An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives.
- An ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions.
- An ability to acquire and apply new knowledge as needed, using appropriate learning strategies.
- An ability to develop innovative thinking to solve bioengineering problems with creativity and entrepreneurship.

Academic Integrity and Research Ethics

The overall mission of the Dept. of Bioengineering is to provide students with an education that enables successful, innovative, and lifelong careers in bioengineering industries and professions, including a recognition of professional and social responsibilities, and sensitivity to ethical and health-related issues.

The UCSD Policy on Academic Integrity states the general rules for student integrity. It establishes the standards that apply to academic course work undertaken by all undergraduate and graduate students of this University. The policy is based on the fundamental tenet that the principle of honesty must be upheld if the integrity of scholarship is to be maintained by an academic community.
Transfer Students in the Bioengineering: Biotechnology (BTEC) Major

1. BTEC Major Flowchart
Please review the flowchart of required courses to determine your progress in completing courses for your BTEC major. Just cross off the UCSD equivalent courses you’ve already completed at community college, and the flowchart will provide you with an accurate snapshot of your status.

2. HSS Boxes on Flowchart
The boxes along the bottom of the flowchart marked “HSS” refer to your college general education (GE) course requirements. Boxes are included to allow for completion of 10 GE courses (40 units); however, depending upon which of the six colleges you are in, you may have to complete more than 10 courses. (Please contact your college advisor to obtain more detailed information.)

3. Following the Flowchart
Hopefully you’ll have completed many of the required lower-division courses at your community college. Since upper division BENG courses are offered only one time a year, it is important to follow your plan to avoid further graduation delay.

4. Flowchart: Freshman Year, Winter Quarter
Note that BENG 1, Introduction to Bioengineering Seminar, could not have been taken at your community college. Please enroll in this course in Winter 2024.

5. Flowchart: Sophomore Year Fall, Winter, and Spring Quarters
Note that CHEM 41A and 41B, Organic Chemistry I and II, may not have been offered at your community college. Please enroll in these courses in Fall 2023 and Winter or Spring 2024 if you have not already taken them.

6. Flowchart: Sophomore Year, Spring Quarter
Note that BENG 100, Intro to Probability and Statistics could not have been taken at your community college. Please enroll in BENG 100 in Spring 2024. Also enroll in MAE 8, MatLab in Spring 2024 if you have not completed this course. Please note that MATH 20E could not have been taken at community college and must be either tested out of or taken at UCSD.

7. Contacting an Advisor About Your Courses
Incoming students will be able to ask departmental questions using the Virtual Advising Center beginning in mid-June 2023. The Virtual Advising Center is available under the Advising tab on TritonLink. In the meantime, you may contact our student affairs staff at be-uginfo@bioeng.ucsd.edu. Bioengineering Student Affairs is located on the Warren campus in Powell-Focht Bioengineering Hall, room 141 (on the 1st floor right next to the elevators). Our building is just a little west of the 2-story Bear sculpture.

8. Fall Quarter Orientation
In Fall 2023, our “New Student Orientation” session will be held during welcome week. (You’ll receive more information about Orientation at a later date.) We will have group Q&A sessions during this time.
BIOENGINEERING: BIOTECHNOLOGY MAJOR ~ “NEW”
(EFFECTIVE FALL 2015)
Accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering & Technology [EAC/ABET]

(ALL COURSES REQUIRED FOR THE MAJOR MUST BE TAKEN FOR LETTER GRADES.)

REV. 4-4-17

---

**FRESHMAN**

- Fall: HSS
- Winter: MATH 20A
- Spring: MATH 20B

**SOPHOMORE**

- Fall: MATH 20A
- Winter: MATH 20B
- Spring: MATH 20C or 31BH

**JUNIOR**

- Fall: MATH 20D
- Winter: PHYS 2C
- Spring: MATH 31AH or 31BH

**SENIOR**

- Fall: PHYS 2A
- Winter: PHYS 2B
- Spring: PHYS 2C

---

* BENG 1 must be taken.

**DE COURSES (FALL):**

**DE COURSES (WTR.):**

++ BENG 191 may be taken once and is recommended for Juniors and Seniors, but not required.

---

Electives:
- BENG 196 (FWS)
- BENG 199 (FWS)

---

HSS
Additional Courses for Medical School

Biotechnology students planning to apply to med school take the following courses in addition major requirements:

1. BILD 2
2. BILD 3
3. PHYS 2BL
4. CHEM 41C
5. CHEM 43A
6. One of the following: BIBC 100, BIBC 102, CHEM 114A, or CHEM 114B
7. One year of English composition or writing (general education courses dependent on written material for grading should suffice)
8. One course in psychology and sociology (PSYC 1 and SOCI 70) helpful for the MCAT but not a prerequisite
9. Recommended additional coursework
   a. Human Physiology (BIPN 100 and/or BIPN 102)
   b. Cell biology (BICD 110)
   c. Molecular Biology (BIMM 100)
   d. Microbiology (BIMM 120)

Most medical schools accept some AP and IB credit for prerequisites. Some medical schools do NOT accept AP/IB credit for prerequisites, and additional upper division coursework may be required. Please consult with a pre-med advisor if you have concerns.

For more information, please visit: [https://career.ucsd.edu/plan/explore/pre-health-med/medicine/prepare.html](https://career.ucsd.edu/plan/explore/pre-health-med/medicine/prepare.html) and consider meeting with a pre-med advisor. This information is meant to guide students in planning for a pre-med track, but may not fully encompass all requirements.
Frequently Asked Questions

1. I was not directly admitted into the Bioengineering department. Is there a way that I can change into any of the “capped” majors later on?

No. The only way for an incoming transfer student to enter a capped major is to be directly admitted from a community college or other university.

2. What are the differences among the four majors within the Bioengineering Dept?

**Bioengineering (BENG):** This major prepares students for careers in the biomedical device industry and for further education in graduate school. Students completing the B.S. degree in Bioengineering have a broad preparation in traditional topics in engineering, allowing for a variety of career pathways. This program addresses the bioengineering topics of biomechanics, bioransport, bioinstrumentation, bioelectricity, biosystems, and biomaterials, and the complementary fields of systems and integrative physiology. Education in these areas allows application of bioengineering and other scientific principles to benefit human health by advancing methods for effective diagnosis and treatment of disease, e.g., through development of medical devices and technologies. The BENG major is accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering & Technology [EAC/ABET].

**Bioengineering: Biotechnology (BTEC):** This major prepares students for careers in the biotechnology industry and for further education in graduate school. The curriculum has a strong engineering foundation with emphasis on biochemical process applications. This program addresses the bioengineering topics of biochemistry, metabolism, kinetics, bioransport, biosystems, bioreactors, bioseparations, tissue engineering, and the complementary fields of cellular physiology. Education in these areas allows application of bioengineering and physicochemical principles to cellular and molecular biology, with the applications that benefit human health. The BTEC major is accredited by [EAC/ABET].

**Bioengineering: Bioinformatics (BINF):** Bioinformatics is the study of the flow of information (genetic, metabolic, and regulatory) in living systems to provide an understanding of the properties of cells and organisms. This major has been developed by the Departments of Bioengineering, Chemistry and Biochemistry, Computer Science and Engineering, and Division of Biology. The bioinformatics major in bioengineering emphasizes systems engineering and model-based approaches to interpreting and integrating bioinformatics data. The bioinformatics major prepares students for careers in the pharmaceutical, biotechnology, and biomedical software industries, and for further studies in graduate school. The BINF major is not accredited by a Commission of [EAC/ABET].

**Bioengineering: BioSystems (BSYS):** This major focuses on the interaction and integration of components in complex biological and engineering assemblages, and how the function and interactions of these components affect overall performance. The major draws on foundations of classical electrical and systems engineering, with biological applications at levels of the molecular and cellular to the physiological and whole organism, and provides an alternative to other bioengineering majors that emphasize mechanical, chemical, and computational approaches. The major prepares students for careers in the bioengineering industry, in research and development, and for further education in graduate, medical, and business schools. The BSYS major is accredited to [EAC/ABET].

3. Is it possible to do research as an undergraduate?

Yes. As a student with lower-division standing, upon completion of 30 UCSD units with a 3.0 GPA, you may request to work with a faculty member and enroll in a BENG 99 (Independent Study for Undergraduates) course. Additionally, when you achieve upper-division standing and have completed a total of 90 units with a 2.5 GPA, you are encouraged to participate in research with a faculty member by
enrolling in a BENG 199 course. Please refer to the Research Labs listing to see an up to date list of our faculty who you may have the option of doing research with.

4. Can I graduate in two years with a major in the Bioengineering Department?

Not usually for transfers. Our department’s major flowcharts are designed to be completed in four years for students who enter as freshmen. Additionally, depending upon which of the 6 UCSD colleges you are in, you will possibly need to plan on taking summer school courses in order to satisfy all “Major” and “College” (General Education breadth) requirements. Engineering students are expected to take a minimum of 16 units (4 classes) most quarters, and either take an increased course load for a few quarters or enroll in some summer session courses at various times during their academic career. While the 6 colleges and the departments are committed to encouraging and assisting students to finish as quickly as possible, it typically takes transfer students 3 years to graduate.

5. How do I know which of my courses will transfer to UCSD from a California community college?

Please use www.assist.org to view the transfer equivalencies between your community college and UC San Diego for your major. If a course you took is not listed as equivalent, you may petition the course for credit with the appropriate department. For example, if you wish to petition to have a Chemistry course you took at community college count for CHEM 40A (Organic Chemistry) you may submit a petition to the Chemistry department. Petitions will only be submitted to the Bioengineering department for courses you believe to be equivalent to Bioengineering courses. Community college courses are typically only eligible for lower division course credit (1-99) at UCSD.

6. I transferred from another 4-year institution or non-California community college. How will I know which of my courses articulate?

The UCs unfortunately do not have articulation agreements with each other, nor with any other 4 year university or out of state community college. You will need to wait until your transcript is processed by admissions over the summer to see which of your courses articulated. This information will be available to view under your Academic History on TritonLink in mid to late summer. If a course you took does not show an articulation, then you will need to directly petition the department that offers the course in the subject you are petitioning.

7. What is needed for a petition?

You should aim to provide as much information as possible, including:
- Name/title/author/edition of the textbook used for the course
- Syllabus for the course
- Any homework assignments/tests (optional, but recommended)
- Undergraduate Student Petition (available under the Forms tab on TritonLink) filled out describing why you believe the course is similar to what you believe to be our equivalent (similar subjects covered, textbook, homework, etc.), and the course that you believe it to be equivalent to as well as where you took the course. A strong petition draws on the similarities between course descriptions (see the UCSD Course Catalog). Please bear in mind that the response rate will vary by department and may take up to a month.
I. Technical Elective (TE) Course Policy

All Bioengineering majors must complete 8 units of technical elective credit to satisfy their major requirements. The number of units that must have “engineering” as the primary component depends on the major, as listed below.

<table>
<thead>
<tr>
<th>MAJOR</th>
<th>Total # of TE Units Required</th>
<th>Minimum # of TE Units with Engineering Content Required</th>
</tr>
</thead>
<tbody>
<tr>
<td>BENG</td>
<td>8</td>
<td>4 units</td>
</tr>
<tr>
<td>BTEC</td>
<td>8</td>
<td>6 units</td>
</tr>
<tr>
<td>BINF</td>
<td>8</td>
<td>8 units</td>
</tr>
<tr>
<td>BSYS</td>
<td>8</td>
<td>8 units</td>
</tr>
</tbody>
</table>

Courses that have “engineering” as its primary component, and are normally approved, include most 4-unit, upper-division (100 series) courses taken for a letter grade, not required for the major and taught in one of the departments of the Jacobs School of Engineering. ALL proposed technical electives must be approved by the Bioengineering Student Affairs office prior to enrollment in the course to verify technical elective credit.

Any portion of the TE requirement not fulfilled by “engineering” courses must be fulfilled by “science” courses. Courses that have “science” as its primary component and are normally approved are 4-unit, upper-division (100 series) courses taken for a letter grade, not required for the major and taught in the departments of Biological Sciences, Chemistry/Biochemistry, or Physics. Courses having a lab component are acceptable.

**BENG 199, Independent Study Research** courses may also be used toward satisfaction of the TE requirement. Students interested in doing research via BENG 199 courses must enroll with the same faculty member in two quarters of BENG 199. Doing so will satisfy both the TE course requirement and the required engineering component.

**“Teams in Engineering Sciences” (TIES)** courses may also be used to satisfy the TE requirement for all departmental majors. The ENG 100D and ENG 100L courses are considered as “engineering”-type TE courses. Students will receive 8 units of TE credit after passing 1 quarter of ENG 100D (4 units) taken concurrently with ENG 100L (2 units), and passing 1 additional quarter of ENG 100L (2 units each), thus satisfying the TE course requirements for the major.

**BENG 196** may be used to fulfill 4 units of technical elective requirements for all majors. Please see the Student Affairs office for instructions on enrolling in this course. **BENG 197 or BENG 198** courses may not be used to satisfy TE requirements in any majors in the Department of Bioengineering.

**Additional Technical Elective Information:**

https://bioengineering.ucsd.edu/undergrad/programs/technical-electives
II. 5 Year Bachelors/Masters Degree

The Department of Bioengineering (BENG) offers a five-year process leading to Bachelor of Science and Master of Science degrees in Bioengineering. It is available to undergraduate students who are enrolled in any of the major programs offered by BENG. The purpose of the BS/MS is to allow interested students to obtain the MS degree within one year following completion of the BS degree. The program is open only to UCSD undergraduates and is only for the MS degree, not the M.Eng degree. Application to this program is a two-step process.

Program Information

Twelve units of Bioengineering graduate level courses must be completed during the student’s senior undergraduate year, in addition to the requirements for the bachelor’s degree.

- These twelve units will count toward the requirements for the master’s degree only and must be taken for a letter grade. The student may take up to six graduate level courses during their senior year; six is the maximum that can be transferred per OGS requirements.

The student will arrange a schedule of courses for the senior year that will fulfill the requirements for the BS degree while also serving the program planned for the MS degree. Students are expected to meet the requirements for the MS degree in one year (three consecutive academic quarters) from the date of the receipt of the BS degree.

- Students are encouraged to meet with the Undergraduate and Graduate Coordinators to plan the undergraduate and graduate courses to be taken during the senior year. Enrollment in graduate level courses is done manually and requires authorization from the Graduate Coordinator.

Admission Requirements

To be eligible, students must have completed the first two quarters of their junior year (according to the “Junior” section of their major flowchart) in residence at UCSD and have an upper-division GPA of 3.5 or better. However, it should be noted that meeting and even exceeding minimum requirements does not guarantee admission. Transfer students are eligible to apply if they meet the junior standing requirement.

Biotechnology Major Requirements
(Note: All descriptions and prerequisites are from the 2022-23 Course Catalog.)

Freshman Year Courses

Fall Quarter
MATH 20A. Calculus for Science and Engineering (4) Foundations of differential and integral calculus of one variable. Functions, graphs, continuity, limits, derivative, tangent line. Applications with algebraic, exponential, logarithmic, and trigonometric functions. Introduction to the integral. (Two credits given if taken after MATH 1A/10A and no credit given if taken after MATH 1B/10B or MATH 1C/10C. Formerly numbered MATH 2A.) Prerequisites: Math Placement Exam qualifying score, or AP Calculus AB score of 3 (or equivalent AB subscore on BC exam), or SAT II MATH 2C score of 650 or higher, or MATH 4C or MATH 10A.

CHEM 6A. General Chemistry I (4) First quarter of a three-quarter sequence intended for science and engineering majors. Topics include atomic theory, bonding, molecular geometry, stoichiometry, types of reactions, and thermochemistry. May not be taken for credit after CHEM 6AH. Recommended: proficiency in high school chemistry and/or physics. Corequisite: MATH 10A or 20A or prior enrollment.

PHYS 2A. Physics—Mechanics (4) A calculus-based science-engineering general physics course covering vectors, motion in one and two dimensions, Newton’s first and second laws, work and energy, conservation of energy, linear momentum, collisions, rotational kinematics, rotational dynamics, equilibrium of rigid bodies, oscillations, gravitation. Students continuing to PHYS 2B/4B will also need MATH 20B. Prerequisites: MATH 10A-B or 20A or 20B or 20C or 31BH. Recommended preparation: prior or concurrent enrollment in MATH 20B.

Winter Quarter
MATH 20B. Calculus for Science and Engineering (4) Integral calculus of one variable and its applications, with exponential, logarithmic, hyperbolic, and trigonometric functions. Methods of integration. Infinite series. Polar coordinates in the plane and complex exponentials. (Two units of credits given if taken after MATH 1B/10B or MATH 1C/10C.) Prerequisites: AP Calculus AB score of 4 or 5, or AP Calculus BC score of 3, or MATH 20A with a grade of C– or better, or MATH 10B with a grade of C– or better, or MATH 10C with a grade of C– or better.

BENG 1. Introduction to Bioengineering (2) An introduction to bioengineering that includes lectures and hands-on laboratory for design projects. The principles of problem definition, engineering inventiveness, team design, prototyping, and testing, as well as information access, engineering standards, communication, ethics, and social responsibility will be emphasized. P/NP grades only. Prerequisites: none. (W)

CHEM 6B. General Chemistry II (4) Second quarter of a three-quarter sequence intended for science and engineering majors. Topics include gases, liquids, and solids, thermochemistry and thermodynamics, physical and chemical equilibria, solubility. May not be taken for credit after CHEM 6BH. Prerequisites: CHEM 6A or 6AH and MATH 10A or 20A. Recommended: concurrent or prior enrollment in MATH 10B or 20B.

Spring Quarter
MATH 20C. Calculus and Analytic Geometry for Science and Engineering (4) Vector geometry, vector functions and their derivatives. Partial differentiation. Maxima and minima. Double integration. (Two units of credit given if taken after MATH 10C. Credit not offered for both MATH 20C and 31BH. Formerly numbered MATH 21C.) Prerequisites: AP Calculus BC score of 4 or 5, or MATH 20B with a grade of C– or better.

PHYS 2B. Physics—Electricity and Magnetism (4) Continuation of PHYS 2A covering charge and matter, the electric field, Gauss's law, electric potential, capacitors and dielectrics, current and resistance, electromotive force and circuits, the magnetic field, Ampere’s law, Faraday's law, inductance, electromagnetic oscillations, alternating currents and Maxwell’s equations. Students continuing to PHYS 2C will also need MATH 20C or 31BH. Prerequisites: PHYS 2A or 4A and MATH 20B or 20C or 31BH. Recommended preparation: prior or concurrent enrollment in MATH 20C or 31BH.

CHEM 6C. General Chemistry III (4) Third quarter of a three-quarter sequence intended for science and engineering majors. Topics include kinetics, acid-base equilibria, electrochemistry, coordination chemistry, and an
introduction to nuclear chemistry. May not be taken for credit after CHEM 6CH. **Prerequisites:** CHEM 6B or 6BH. Recommended: completion of MATH 10B or 20B.

CHEM 7L. General Chemistry Laboratory (4) Condenses a year of introductory training in analytical, inorganic, physical, and synthetic techniques into one intensive quarter. A materials fee is required. A mandatory safety exam must be passed. Students may not receive credit for both CHEM 7L and CHEM 7LM. **Prerequisites:** CHEM 6B or CHEM 6BH.

**Sophomore Year Courses**

**Fall Quarter**

**MATH 20D. Introduction to Differential Equations (4)** Ordinary differential equations: exact, separable, and linear; constant coefficients, undetermined coefficients, variations of parameters. Systems. Series solutions. Laplace transforms. Techniques for engineering sciences. Computing symbolic and graphical solutions using Matlab. (Formerly numbered MATH 21D.) May be taken as repeat credit for MATH 21D. **Prerequisites:** MATH 20C (or MATH 21C) or MATH 31BH with a grade of C– or better.

**BILD 1. The Cell (4)** An introduction to cellular structure and function, to biological molecules, bioenergetics, to the genetics of both prokaryotic and eukaryotic organisms, and to the elements of molecular biology. Recommended preparation: prior completion of high school- or college-level chemistry course.

**CHEM 40A. Organic Chemistry I (4)** Renumbered from CHEM 140A. Introduction to organic chemistry with applications to biochemistry. Bonding theory, isomerism, stereochemistry, chemical and physical properties. Introduction to substitution, addition, and elimination reactions. Students may only receive credit for one of the following: CHEM 40A, 40AH, 140A, or 140AH. **Prerequisites:** CHEM 6B or CHEM 6BH.

**Winter Quarter**

**PHYS 2C. Physics—Fluids, Waves, Thermodynamics, and Optics (4)** Continuation of PHYS 2B covering fluid mechanics, waves in elastic media, sound waves, temperature, heat and the first law of thermodynamics, kinetic theory of gases, entropy and the second law of thermodynamics, Maxwell’s equations, electromagnetic waves, geometric optics, interference and diffraction. Students continuing to PHYS 2D will need MATH 20D. **Prerequisites:** PHYS 2A or 4A, and MATH 20C or 31BH. Recommended preparation: prior or concurrent enrollment in MATH 20D. Prior completion of PHYS 2B is strongly recommended.

**PHYS 2CL. Physics Laboratory—Electricity and Magnetism (2)** Experiments on L-R-C circuits; oscillations, resonance and damping, measurement of magnetic fields. One hour lecture and three hours laboratory. Program or materials fee may apply. **Prerequisites:** PHYS 2A or 4A, and 2B or 4C. Recommended preparation: prior or concurrent enrollment in PHYS 2C or 4D.

**MATH 18. Linear Algebra (4)** Matrix algebra, Gaussian elimination, determinants. Linear and affine subspaces, bases of Euclidean spaces. Eigenvalues and eigenvectors, quadratic forms, orthogonal matrices, diagonalization of symmetric matrices. Applications. Computing symbolic and graphical solutions using Matlab. Students may not receive credit for both MATH 18 and 31AH. **Prerequisites:** Math Placement Exam qualifying score, or AP Calculus AB score of 3 (or equivalent AB subscore on BC exam), or SAT II Math Level 2 score of 650 or higher, or MATH 4C, or MATH 10A, or MATH 20A. Students who have not completed listed prerequisites may enroll with consent of instructor.

**CHEM 40B. Organic Chemistry II (4)** Renumbered from CHEM 140B. Continuation of CHEM 40A, Organic Chemistry I. Methods of analysis, chemistry of hydrocarbons, chemistry of the carbonyl group. Introduction to the reactions of biologically important molecules. Students may only receive credit for one of the following: CHEM 40B, 40BH, 140B, or 140BH. **Prerequisites:** CHEM 40A or 140A (a grade of C or higher in CHEM 140A or 40A is strongly recommended).

**Spring Quarter**

**BENG 100. Introduction to Bioengineering Design (4)** General introduction to probability and statistical analysis, applied to bioengineering design. Topics include preliminary data analysis, probabilistic models, experiment design, model fitting, goodness-of-fit analysis, and statistical inference/estimation. Written and software problems are
provided for modeling and visualization. **Prerequisites:** BENG 1, MATH 18 or MATH 31AH or MATH 20F, MATH 20C or MATH 31BH, and MATH 20D, and PHYS 2A-B-C, or consent of department. (S)

**MAE 8. Matlab Programming for Engineering Analysis (4)** Computer programming in Matlab with elementary numerical analysis of engineering problems. Arithmetic and logical operations, arrays, graphical presentation of computations, symbolic mathematics, solutions of equations, and introduction to data structures. **Prerequisites:** MATH 20A and 20B or consent of instructor.

**MATH 20E. Vector Calculus (4)** Change of variable in multiple integrals, Jacobian, Line integrals, Green’s theorem. Vector fields, gradient fields, divergence, curl. Spherical/cylindrical coordinates. Taylor series in several variables. Surface integrals, Stoke’s theorem. Gauss’ theorem. Conservative fields. **Prerequisites:** MATH 18 or MATH 20F or MATH 31AH and MATH 20C (or MATH 21C) or MATH 31BH with a grade of C– or better.

**Junior Year Courses**

**Fall Quarter**

**CENG 101A. Introductory Fluid Mechanics (4)** Kinematics and equation of motion; hydrostatics; Bernoulli’s equation; viscous flows; turbulence, pipe flow; boundary layers and drag in external flows; applications to chemical, structural, and bioengineering. Students may not receive credit for both MAE 101A and CENG 101A. **Prerequisites:** admission to the major and grades of C– or better in PHYS 2A, MATH 20D, and 20E, or consent of instructor.

**MAE 170. Experimental Techniques (4)** Principles and practice of measurement and control and the design and conduct of experiments. Technical report writing. Lectures relate to dimensional analysis, error analysis, signal-to-noise problems, filtering, data acquisition and data reduction, as well as background of experiments and statistical analysis. Experiments relate to the use of electronic devices and sensors. **Prerequisites:** PHYS 2C or PHYS 4B and PHYS 2CL or MAE 140. Enrollment restricted to MC 25, MC 27, MC 29, CE 25, BE 25, BE 27.

**BICD 100. Genetics (4)** An introduction to the principles of heredity emphasizing diploid organisms. Topics include Mendelian inheritance and deviations from classical Mendelian ratios, pedigree analysis, gene interactions, gene mutation, linkage and gene mapping, reverse genetics, population genetics, and quantitative genetics. **Prerequisites:** BILD 1 and BILD 3 (note: BILD 3 is a required prerequisite, but not a major requirement).

**Winter Quarter**

**BENG 123. Dynamic Simulation in Bioengineering (4)** Dynamic simulation of biochemical reaction networks, including reconstruction of networks, mathematical description of kinetics of biochemical reactions, dynamic simulation of systems of biochemical reactions, and use of simulators for data interpretation and prediction in biology. Emphasis on a design project. **Prerequisites:** MATH 18 or MATH 31AH, MATH 20D, BENG 120, or CHEM 40B; majors only or consent of department. (W)

**BENG 168. Biomolecular Engineering (4)** Basic molecular biology and recombinant DNA technologies. Structure and function of biomolecules that decode genomes and perform energy conversion, enzymatic catalysis, and active transport. Metabolism of macromolecules. Molecular diagnostics. Design, engineering, and manufacture of proteins, genomes, cells, and biomolecular therapies. **Prerequisites:** BILD 1 and BENG 100, or consent of department. (W)

**BENG 130. Biotechnology Thermodynamics and Kinetics (4)** An introduction to physical principles that govern biological matter and processes, with engineering examples. Thermodynamic principles, structural basis of life, molecular reactions and kinetics, and models to illustrate biological phenomena. **Prerequisites:** CHEM 6B, MATH 20A, 20B, 20D, PHYS 2A, 2B, 2C; majors only or consent of department. (W)

**Spring Quarter**

**BENG 187A. Bioengineering Design Project: Planning (1)** General engineering design topics including project planning and design objectives, background research, engineering needs assessment, technical design specifications, engineering standards, and design requirements and constraints. Introduction to biomedical and biotechnology design projects. Career and professional advising. Majors must enroll in the course for a letter grade in order to count the sequence toward the major. No exceptions will be approved. **Prerequisites:** BENG 112A or BENG 152 or BENG 168; bioengineering, bioengineering: biotechnology, or bioengineering: biosystems majors only or consent of
BENG 103B. Bioengineering Mass Transfer (4) Mass transfer in solids, liquids, and gases with application to biological systems. Free and facilitated diffusion. Convective mass transfer. Diffusion-reaction phenomena. Active transport. Biological mass transfer coefficients. Steady and unsteady state. Flux-force relationships. (Credit not allowed for both CENG 101C and BENG 103B.) Prerequisites: CENG 101A or MAE 101A or BENG 112A, or consent of department. (S)

BENG 160. Chemical and Molecular Bioengineering Techniques (4) Introductory laboratory course in current principles and techniques of chemistry and molecular biology applicable to bioengineering. Quantitation of proteins and nucleic acids by spectrophotometric, immunological, and enzymatic methods. Separations and purification by centrifugation, chromatographic, and electrophoretic methods. Course materials fees may apply. Prerequisites: BICD 100, BENG 100, MAE 170; majors only or consent of department. (S)

Senior Year Courses

Fall Quarter

BENG 187B. Bioengineering Design Project: Development (1) Development of an original bioengineering design for solution of a problem in biology or medicine. Analysis of economic issues, manufacturing and quality assurance, ethics, safety, design constraints, government regulations, and patent requirements. Oral presentation and formal engineering reports. Career and professional advising. Majors must enroll in the course for a letter grade in order to count the sequence toward the major. No exceptions will be approved. Prerequisites: BENG 187A; concurrent enrollment in one of BENG 119A, BENG 126A, BENG 127A, BENG 128A, BENG 129A, BENG 139A, BENG 147A, BENG 148A, BENG 149A, BENG 169A, or BENG 179A; bioengineering, bioengineering: biotechnology, or bioengineering: biosystems majors only or consent of instructor. (F)

BENG 166A. Cell and Tissue Engineering (4) Engineering analysis of physico-chemical rate processes that affect, limit, and govern the function of cells and tissues. Cell migration, mitosis, apoptosis, and differentiation. Dynamic and structural interactions between mesenchyme and parenchyma. The role of the tissue microenvironment including cell-cell interactions, extracellular matrix, and growth factor communication. The design of functional tissue substitutes including cell and material sourcing, scale-up and manufacturability, efficacy and safety, regulatory, and ethical topics. Clinical applications. Prerequisites: BENG 103B or BENG 112B; senior standing or consent of department. (F)

BENG 162. Biotechnology Laboratory (4) Laboratory practices and design principles for biotechnology. Culture of microorganisms and mammalian cells, recombinant DNA bioreactor design and operation. Design and implementation of biosensors. A team design-based term project and oral presentation required. Course materials fees may apply. Prerequisites: MAE 170 and BENG 160; majors only or consent of department. (F)

BENG 161A. Bioreactor Engineering (4) Engineering, biochemical, and physiological considerations in the design of bioreactor processes: enzyme kinetics, mass transfer limitations, microbial growth, and product formation kinetics. Fermentation reactor selection, design, scale-up, control. Quantitative bioengineering analysis and design of biochemical processes and experiments on biomolecules. Prerequisites: BENG 123 and BENG 160 or consent of department. (F)

Winter Quarter

BENG 187C. Bioengineering Design Project: Implementation (1) Approaches to implementation of senior design project, including final report. Teams will report on construction of prototypes, conduct of testing, collection of data, and assessment of reliability and failure. Majors must enroll in the course for a letter grade in order to count the sequence toward the major. No exceptions will be approved. Prerequisites: BENG 187B; concurrent enrollment in one of the following lab sections: BENG 119B, BENG 126B, BENG 127B, BENG 128B, BENG 129B, BENG
BENG 161B. Biochemical Engineering (4) Commercial production of biochemical commodity products. Application of genetic control systems and mutant populations. Recombinant DNA and eukaryotic proteins in E. coli and other host organisms. Product recovery operations, including the design of bioseparation processes of filtration, adsorption, chromatography, and crystallization. Bioprocess economics. Human recombinant erythropoietin as an example, from genomic cloning to CHO cell expression, to bioreactor manufacturing and purification of medical products for clinical application. **Prerequisites:** BENG 161A or consent of department. (W)

**Spring Quarter**

BENG 187D. Bioengineering Design Project: Presentation (1) Oral presentations of design projects, including design, development, and implementation strategies and results of prototype testing. Majors must enroll in the course for a letter grade in order to count the sequence toward the major. No exceptions will be approved. **Prerequisites:** BENG 187C; bioengineering, bioengineering: biotechnology, or bioengineering: biosystems majors only or consent of instructor. (S)

BENG 125. Modeling and Computation in Bioengineering (4) Computational modeling of molecular bioengineering phenomena: excitable cells, regulatory networks, and transport. Application of ordinary, stochastic, and partial differential equations. Introduction to data analysis techniques: power spectra, wavelets, and nonlinear time series analysis. **Prerequisites:** BENG 122A or BENG 123 or consent of department. (S)

*BENG 191/291. Senior Seminar I: Professional Issues in Bioengineering (2) (Conjoined with BENG 291.) Instills skills for personal and organizational development during lifelong learning. Student prepares portfolio of personal attributes and experiences, prepares for career interviews plus oral report of interviewing organizational CEO. Graduate students will prepare a NIH small business research grant. **Prerequisites:** consent of instructor. (F)

Two (“A” & “B”) Design Elective Courses (6 units total) - Seniors work in teams on a project to design a solution to a multidisciplinary bioengineering problem suggested by professionals in bioengineering industry, academia, or medicine. Taken Fall and Winter quarter of Senior year.

**Two 4-unit Technical Elective courses**
Required for all students

*Recommended but not required; may be taken once.
**See departmental Student Affairs Office for additional information.
